SPECIAL MACHINE CONSTRUCTION

jerko
Sprühsysteme

CUSTOMISED & ALL FROM ONE SOURCE

This is what we offer

Thanks to years of experience, we know what matters if any machinery must be built for such an environment.

Our team has been carefully set up of cross-sector experts. That is why we resort to expert knowledge from the forming technology, crane construction and pipe mills.

Our international network allows us to offer complex projects.

The great production depth guarantees a constantly high quality so that you as the customer can benefit from maximum transparency.

Whether you need a new construction or a retrofit — if you go for a special machine from Jerko, you are always on the winning side!

Our services — an overview

A miniature industrial scene with workers and a large gear. The scene is lit with a blue and green glow. A large, glowing blue gear is the central focus. Several small figures of workers in hard hats and work clothes are scattered around the gear, some appearing to be working on or inspecting it. The background is dark, with some faint lights and structures, suggesting a factory or industrial setting.

- Planning and advisory service
- 3D design
- Control & control cabinet engineering
- Hydraulics & pneumatics
- Steel construction
- CNC manufacture
- Retrofitting
- Designed and built according to Machinery Directive 2006/42/EC

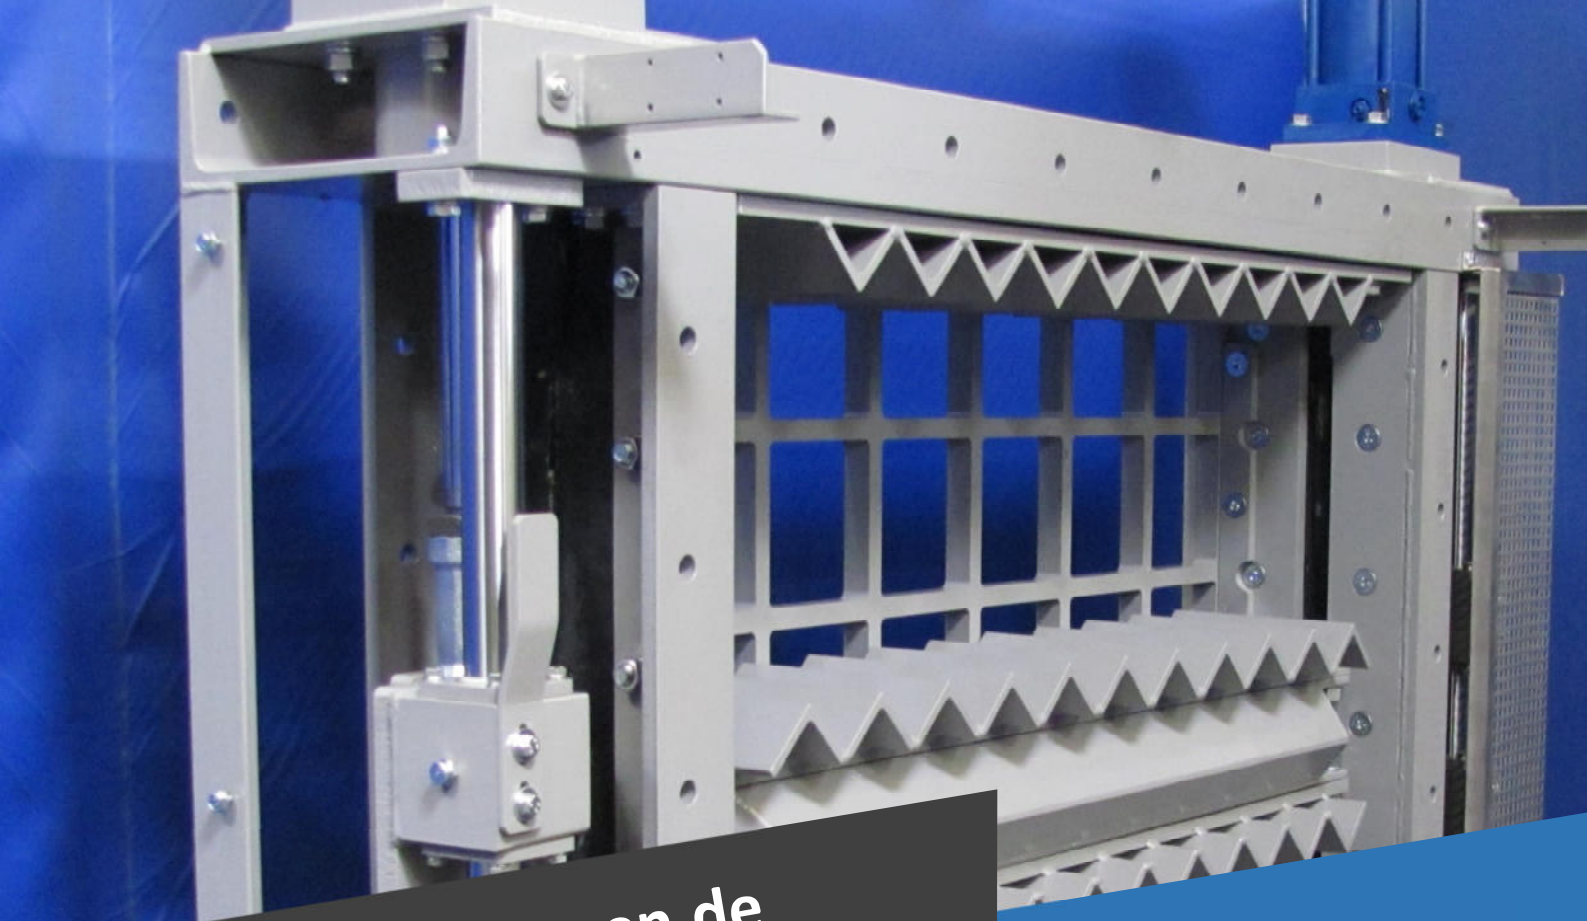

For more than 25 years ...

... we have been developing, manufacturing and installing systems and special machinery related to bulk metal forming and other industrial applications.

From planning to assembly and putting into service — we support you right from the start.

Project examples:

- Robots — transfer systems for forming presses
- Press automation
- Feeders with parts separation
- Conveyor belts for hot components
- Optimisation of forming tools
- Mandrel bar cooling
- Container construction process water treatment
- Plasticiser presses for the plastics industry
